ChatGPT-5o.

Prompt: "Is `<br>` inside `<p>` legal?"

Yes, apparently, and it is used primarily for things like poetry too.

-- Sherif.

ChatGPT-5o.

Prompt: "Why isn't this code wrapping around. I need the 30% section to wrap around to the other side. Is that possible in pure HTML?"

The first answer was a strong no, but it contradicts the spec sheet. I pressed it further and gave it a screenshot of that part of the spec sheet.

It said it was still correct, but the only way which is common in this type of course is to use `<table>`. I take the "common in this course" with a grain of salt, but if it works, it works.

I added one `<tr>` row, and two `<td>` to make that sort of alignment work without CSS.

ChatGPT-5o.

Prompt: "What or how exactly is "span" and "required" used, can you give examples?"

It is apparently used right inside `<label>` with `"class = "required""` which makes sense.

-- Sherif.

ChatGPT-5o.

Prompt: "How does ARIA work in forms? How is it even linked to `<span>`?"

The answer is very simple... ids. The name of the “describedby” linked to id in span.

-- Sherif.

ChatGPT-5o.

Prompt: “Is <div> supposed to be in or between forums, and why... example also.”

Yes, in, not between. It is a very bad idea to place it between.

-- Sherif.

ChatGPT-5o.

Prompt: “Is tab-index 0-index?”

No.

-- Sherif.

ChatGPT-5o.

Prompt: “What is ‘role’ and is it important?”

Eh, yes and no. It is good-to-have, but W3C complains about it apparently.

-- Sherif.

ChatGPT-5o.

Prompt: “Is nesting field-set allowed?”

Yes.

-- Sherif.

ChatGPT-5o.

Prompt: “Can you replicate this for me, since typing this is exhausting.

<optgroup label="Faculty of Engineering">

<option value="Computer Science">Computer Science</option>

```
<option value="Information Technology">Information  
Technology</option>  
  <option value="Software Engineering">Software  
Engineering</option>  
  <option value="Computer Engineering">Computer  
Engineering</option>  
</optgroup>"
```

I had it repeat some text for me since filling it in manually was exhausting and is very error prone to typos and human error.

-- Sherif.

We used AI on repetitive stuff that we already worked on, we didn't use it to copy paste, we used it to understand and learn and do the stuff ourselves
